I was surprised by how fast ChatGPT was able to come up with the code. The project that took me a couple of hours only took the AI a couple of seconds to generate. The picture that it created wasn't exactly right, but it was still recognizable and about the same level of quality as mine in terms of what was used to create the image. With tweaking and training, the AI could definitely create something of quality much faster than I would be able to. That fact is kind of scary and makes me worry for the future of creative careers. At the same time though, it's fascinating to see how AI works and what it can do.

```
1 function setup() {  
2   createCanvas(400, 400);  
3   background(240);  
4  
5   // Pizza slice (triangle)  
6   fill(255, 204, 0); // Cheese color  
7   noStroke();  
8   beginShape();  
9   vertex(200, 50); // Tip of the slice  
10  vertex(300, 300); // Bottom right corner  
11  vertex(100, 300); // Bottom left corner  
12  endShape(CLOSE);  
13  
14  // Crust (arc at the top)  
15  fill(210, 105, 30); // Crust color  
16  arc(200, 50, 120, 60, PI, 0);  
17  
18  // Pepperoni (circles)  
19  fill(200, 0, 0); // Pepperoni color  
20  ellipse(170, 150, 30); // First piece  
21  ellipse(230, 180, 30); // Second piece  
22  ellipse(200, 240, 30); // Third piece  
23  
24  // Add some "grease spots" (random small circles)  
25  fill(255, 220, 150, 200);  
26  ellipse(220, 130, 10);  
27  ellipse(180, 220, 12);  
28  ellipse(210, 270, 8);  
29 }
```
